

# OBJECT-ORIENTED PROGRAMMING

THE SOFT WARRIORS

MEETING REPORT

## **MEMBERS:**

JEAN PIERRE CANCHINGRE

DANIEL CODENA

MARIA PAREDES

JOEL SANCHEZ

JOEL TAPIA

**DOCENTE:** Ing. JORGE EDISON LASCANO

**NRC: 30812**

**SANGOLQUÍ-ECUADOR**

## **Report**

- **Reason for the meeting**

We met with the client to understand how his minimarket selling disposable plates, cups, containers, and cutlery operates. He explained the challenges he faces in managing his business and what improvements he'd like to make.

- **How do you currently work?**

The client told us that he currently records sales in a notebook and uses a calculator for pricing. Customers who buy on credit are only noted in a notebook, and sometimes he forgets who owes him money. He also mentioned that several products, like biodegradable cups, have expiration dates, but he misses them and ends up throwing away merchandise. In addition, he told us that sometimes suppliers raise prices without notifying him, and he only realizes it too late, after he's already lost profits. He'd also like to offer promotions like party kits (plates + cups + cutlery), but he's not sure how to calculate the discount without losing money.

- **What worries you the most?**

The client told us that his most urgent concern is to stop losing money on expired products and not being aware of supplier price increases in a timely manner. He's also worried that customers who buy on credit sometimes don't pay, and he doesn't keep good track of them. He asked us to make the system very easy and quick to use, because he's not a computer expert. He even suggested that it could be operated using only the keyboard, without needing a mouse.

- **Our commitment**

We explained that we're going to create a system tailored to his business, designed for neighborhood stores like his, not like the complicated systems used by large supermarkets. He asked us to keep him updated weekly, and we agreed to meet again when we have a first prototype to show him.
